### Membrane Filters

The micro porous membrane filter is mainly used for the filtration of mobile phase and samples during the chromatographic analysis, especially for preventing chromatographic column, infusion pump line system and sample valve for pollution. They are widely used in gravimetric analysis, microanalysis, colloid separation and sterility testing. The filter membranes are made of different materials, such as: PTFE (polytetrafluoroethylene), PES (polyethersulfone), CA (acetic acid fiber), nylon 6, etc.
